

Photovoltaic – Trainingsystem for vocational and advanced training

The Solar branch is one of the important growth markets of the future. The number of jobs grows, the demand of specialists and executive staffs increases continuously. For this reason worldwide the vocational and advanced training in the field of photovoltaic will become more and more important.

Development

In cooperation with the ISET - Institut für Solare Energieversorgungstechnik e. V. (now: Fraunhofer Institut für Windenergie und Energiesystemtechnik IWES) in Kassel the company IKS Photovoltaik developed the Photovoltaic-Trainingsystem Solartrainer profi.

Application

The PV-Trainingsystem is suited for the instruction at schools, vocational training Schools, training centres, evening classes and universities. Supported learning objectives can be electrical and system engineering, construction, mode of operation, connecting and installation of PV-plants. It can be used both to the supplementary demonstration of lessons and courses as well as for the use in practical training.

Construction

The system consists of individual plugin units each with components for different experimental arrangements. The plugin units are put in the rackside and connected according to the demand. The conception of the system allows indoor and outdoor experiments. Indoor experiments are easily possible among others because of the system included PV-module

plus module stand. Using a dimmable spotlight which is vertically as well as horizontally movable fixed to an outrigger, seasonal daily curves can easily be simulated.

Additional options are the change of slope angle and the simulation of the influence of irradiation and temperature on the characteristic curve of a PV-module.

To ensure a reproducibility of measurements and not to depend on the weather, a PV-module simulator was developed, which exactly simulates the behaviour of a PV-module. The short circuit current can be adjusted.

What a pupil or trainee can work out on his own in practice oriented lab-scale experiments, is transferable to real systems without problems.

Flexible

The modular conception of the system allows the selection of the plug-in units and components for the different training objectives.

The at any time possible enlargement and integration of new technology assure a system that is always state-of-the-art.

Instructional materials

An experimental instruction as well as two developed training sessions are available.

Experiments

The basic principles of photovoltaics considering the influence of different parameters can also be imparted as the application of direct connected small systems, the mains behaviour of stand alone systems and the especially for craftsmen very important line powered operation mode:

- Characteristic curve of a diode, respectively a diode series
- Characteristic curve of a solar module (I/U) and (U/P), MPP
- Characteristic curve of a solar module (I/U) depending on irradiation
- Characteristic curve of a solar module (I/U) depending on temperature
- Power output of a solar module depending On the angle of incidence of the light
- Simulation: Power output of a solar module depending on the position of the sun (morning to evening / winter- and summertime)
- Series connection of solar modules
- Parallel connection of solar modules
- Series connection of solar modules and shadowing without bypass-diode
- Series connection of solar modules and shadowing with bypass-diode
- Grid parallel operation mode
Different operation modes and directions of electric energy power flow. Calculation of the efficiency (inverter)
- Stand alone systems DC and AC. Different operation modes
- Integration of outdoor solar module

The listing does not contain all experiments which are possible to carry out. The possibility of carrying out the experiments is depending on the equipment. Technical changes reserved 2014-06

ST 01
Solar Module
Connection Indoor

For connecting the solar module of "ST 14 module stand" to the socket on the front. The two front sockets of the schematically shown solar module can be connected to a variable load (e.g. ST 20 B). Measuring of voltage and current.

ST 05 O / ST 05 D
Inverter Grid Connection

Transforms direct current into sinusoidal alternating current, single-phase feed-in, line-commutated. Input 28 - 50 V DC, MPP-tracking AC power approx. 110 W
Available versions:
230 V / 50 Hz (ST 05 O / ST 05 D)
230 V / 60 Hz (ST 05 D)
115 V / 60 Hz (ST 05 D)

ST 02
Solar Module Simulated

Solar module simulator for the exact simulation of a solar module.
Short circuit current can be adjusted in steps or variably. Parallel and series connection possible
Switchable bypass diode.
Mains connection 230 V / 50-60 Hz.
Open circuit voltage 23.1 V, short circuit current 0 -1.5 A, rated power 24 Wp

ST 06 R
Inverter Island Grid

Transforms direct current into rectangular alternating current for operation of an island grid system. Input 12 V DC/8 A, output 230 V / 50 Hz.
AC power approx. 100 W

ST 03
Generator Terminal Box

For the parallel connection of 4 solar modules/ simulators each via one diode onto one output.
Overvoltage protection
Without function. Max. current per input 24 V/3 A DC-disconnector.

ST 06 S
Inverter Island Grid

Transforms direct current into sinusoidal alternating current for operation of an island grid system.
Input 12 V DC/8 A
AC power approx. 100 W
Available versions:
230 V / 50 Hz
230 V / 60 Hz
115 V / 60 Hz

ST 04
Solar Charge Controller

For monitoring of the state of charge state of the battery. Controls the loading process and the connection and disconnection of loads (low voltage disconnection). Operation status on LCD display.
Rated voltage 12 V/max 8 A

ST 07
AC Load Connection

For connection to the mains (via "ST 13 Mains connection") or to an inverter island grid ("ST 06 / ST 06 A") and operation of alternating current loads of max. 450 W
Available versions:
230 V / 50-60 Hz
115 V / 60 Hz

ST 08 DC Load Connection

For connection to "ST 04 solar charge controller" and operation of direct current loads 12 V / max. 8 A

ST 12 Automatic Insulation Unit

For monitoring single-phase power feeding systems. It prevents uncontrolled island effects following failure or shutdown of the public electricity supply. Operating voltage 230 V / 50 Hz

ST 09 Battery Connection

For the connection of "ST 21 solar-battery" to "ST 04 charge controller"

ST 13 Mains Connection

Three-phase AC connection for connection of the public grid via a 5-pole CEE coupling 16 A to the training system. Adapter cable for single-phase available.

ST 10 Electric Meter

Single-phase electronic AC meter for measuring of the generated solar energy. Display of current power, kWh, measurement duration, inputting of tariff possible. Available versions: 230 V / 50 Hz, 230 V / 60 Hz, 115 V / 60 Hz

ST 11 Input /Supply Meter

Single-phase electronic AC meters for measuring of the solar energy fed into the grid and for measuring of the energy drawn from the grid. Display same as ST 10. Available versions: 230 V / 50 Hz, 230 V / 60 Hz, 115 V / 60 Hz

ST 14 Module Stand

For the illumination of a 10 W solar module by means of a 400 W dimmable halogen spotlight. The inclination of the solar module and the height and distance of the spotlight to the solar module are Adjustable. The inclination of the spotlight can also be altered by fine adjustment. The solar module can be swung to simulate the sun's path during the day. Power supply 230 V / 50-60 Hz.

ST 15
Solar Module
Connection Outdoor

For connection of the module "ST 22 Solar Module Outdoor " or similar to the socket on the front. The solar module is connects to the two front sockets of the schematically shown solar module.

ST 19
Set of Safety Test Leads
with movable laboratory stand

Highly flexible safety-test leads with 4 mm plugs. Contacts gold-plated brass/hard copper, inclusive movable laboratory stand with 2 brackets supplied with total 42 holding fingers. Lockable wheels, height 1.45 m

ST 16
Diode Series Connection

To perform the basic experiments "Characteristic curve of a diode" and "Characteristic curve of a diode series connection". Power supply external 24 V DC by "ST 27 Power Supply".

ST 20 AC
AC Load

Panel 1
60 W bulb
Standard plug socket with switch.
Available versions:
230 V / 50-60 Hz
115 V / 60 Hz

ST 17
Shunt

For measuring current up to 1.5 A as voltage drop at the shunt resistance. E.g. for measurements in grid parallel operation circuits using an oscilloscope.

ST 20 AC
AC Load

Panel 2
60 W bulb.
Standard plug socket with switch.
Available versions:
230 V / 50-60 Hz
115 V / 60 Hz

ST 18
Set of Safety Test Leads

Highly flexible safety-test leads with 4 mm plugs. Contacts gold-plated brass/hard copper, inclusive wall bracket with 21 holding fingers.

ST 20 AC
AC Load

Panel 3
9 W Energy-saving lamp.
Standard plug socket with switch.
Available versions:
230 V / 50-60 Hz
115 V / 60 Hz (15 W)

SOLARTRAINER

Profi

**ST 20 DC
DC Load**

Panel 4
50 W halogen lamp,
with switch, 12 V.

**ST 23
DC Meter**

Electronic DC meter for
measuring direct current loads.
Using in load circuits.
Display of current power and
Wh, reset button.

**ST 20 RW
Set of electrical loads**

Four variable resistors:
15 Ohm / 5,5 A
170 Ohm / 1,7 A
325 Ohm / 1,2 A
15,8 K.Ohm / 0,17 A

**ST 24
Set Multimeter**

Particularly robust.
Automatic range selection,
large display.
DC / AC max. 1000 V,
max. 10 A

**ST 21
Solar Battery**

Closed lead-gel battery
especially for storing solar
energy. Connected via
"ST 09 battery connection"
to "ST 04 solar charge
controller" for operation of
an island grid with storage.
12 V / 27 Ah C100.

**ST 27
Power Supply**

For the power supply of
"ST 16 diode series connection"
Control range 0 - 30 V DC / 0-2 A
Power supply:
115-230 V / 50-60 Hz.

**ST 22
Solar Module Outdoor**

Solar module for outdoor
experiments. Angle of
inclination adjustable,
can be read off on a large
degree scale
Power 55 Wp
Operation with "ST 15
Solar module connection
outdoor".

**ST 28 Solar Module polycrystalline
ST 28 Solar Module amorphous**

Alternatively additional
solar module for
"ST 14 module
Frame". Quick
change holder.
Power:
Polycrystalline ca. 10 W
Amorphous ca. 5 W

**ST 30
Fuse Box**

Fuse box with 4-pole FI-
circuit breaker, CEE plug
and 1.5 m feed cable with
CEE plug.
400 V / 50 Hz.

SOLARTRAINER

Profi

ST 95 Transformer

For the adaption of ST 02 and ST 14 in 115 V-gridss. Inclusive outlet strip 230 V
Transformer 115 V AC to 230 VAC / 500 W

ST 96 Laboratory Table

Laboratory table , lockable wheels. Serves as a support for "ST 99 take-up frame", incl. fastening screws.
Tabletop 1.25 x 0.62 m, height 0.74 m

ST 99 15 panels Holding Frame

Take-up frame for 15 instruction panels.

ST 99 10 panels Holding Frame

Take-up frame for 10 instruction panels.

ST 97 Basic Photovoltaic Laboratory

Detailed experimental instructions on 12 themes, with solutions. Available in German English Spanish French

ST 98 Instruction Manual

Instructions for all components. Available in German English Spanish French
